

Additional Information

This notice includes information related to your product. Please read this sheet carefully and retain for your reference.

1. Jumper Settings

1.1 In normal use, the V9958 video board requires a jumper between pins 9 and 11 of J2.

The included pin header for J2 has this jumper pre-installed for you.

This jumper is not required if external hardware is being used to provide video sync information.

In cases where a daughterboard is being connected to J2 and external sync is not being used, this connection should be made on the daughterboard (or, for example, a jumper may be provided for this purpose).

1.2 JP1 Jumper for revision 1.2 main board

If you have a revision 1.2 main board, you will need to connect a jumper to JP1 to enable DTACK handling. A header and jumper is included in pack 3 for this.

If you have a revision 1 board, do not connect this jumper. Although unlikely, it is possible damage may occur if this jumper is connected when used with a revision 1 board.
